

Polyseam / Protecta Statement on EU Taxonomy, EPDs, and ISO 14001 Compliance:

Polyseam & Protecta Product Range:

At Polyseam, sustainability is a core part of our mission. Through our Protecta range of fire protection and sealing products, we are committed to providing environmentally responsible solutions that support our customers' compliance with evolving regulatory frameworks, including the EU Taxonomy Regulation.

To support transparency and environmental accountability, we provide Environmental Product Declarations (EPDs) for our products. These third-party verified documents offer detailed, life cycle-based data on environmental impacts, in accordance with EN 15804 and ISO 14025 standards. While EPDs alone do not constitute full compliance with the EU Taxonomy, they are a critical component in demonstrating alignment with its technical screening criteria—particularly in sectors such as construction and manufacturing. EPDs help our customers:

1. Access quantified, verifiable environmental data
2. Meet life cycle assessment (LCA) requirements
3. Provide supporting documentation for green building certifications and sustainable finance disclosures

In addition, Polyseam is certified to ISO 14001, the international standard for environmental management systems. This certification demonstrates our systematic approach to minimising environmental impact, complying with legal and regulatory requirements, and continuously improving our environmental performance. Our ISO 14001 certification further strengthens our alignment with the minimum safeguards and environmental governance principles outlined in the EU Taxonomy.

We are proud to support our customers in achieving their sustainability goals.
